

10. Science Eye

Every human on the globe is made of an octillion vibrating quarks which are divebombed at two hundred million meters a second by nine quintillion neutrinos every day, while being constantly enveloped with multiple types of electromagnetic radiation.(1-3) Yet far less glamorous is the fact that each body comes from the same elements found in the soil, and will all turn back to dirt.

By its widest definition science is possession of knowledge as distinguished from ignorance or misunderstanding.(4) By that definition my entire book is dedicated to science. However, science in this chapter reflects common definitions: knowledge concerned with the physical world and its phenomena, branches of systematized knowledge made into specific objects of study, and generally accepted knowledge that has been accumulated and formulated with reference to the discovery of established truths or laws.
